I have experience with front-end & back-end web development. But mostly I worked with front-end development. Over the last few months, I have successfully done most of the projects using ReactJs which is the most popular JavaScript library in the world.

SKILLS:

Front-End: HTML5, CSS3, TailwindCSS, JavaScript ES6, React, Redux, ExpressJs, DaisyUI
Back-End: NodeJs, ExpressJs, MongoDB, JWT security others.
Tools: Vs Code, Git Version Control, Heroku, Vercel, Firebase, Netlify, Postman
Familiar-with : NextJs, Typescript, React Native

Education:

Dudmukha High School - High School Student, 2021 - Present (last year)

Languages:

- English - Intermediate to Speak, Advanced in Writing, communication level
- Bangla - Fluent (Everything is professional)
- Arabic - Reading & Writing

Projects:

Redux E-commerce Cart : Live Preview - Source Code

- An Ecommerce cart website mainly developed by ReduxJs for State Management. from Anywhere we can access & modify our data with the power of Redux.
- We can easily Filtering products by Category & shown the active tab
- Dark Mode and Light Mode both implemented

Tool Manufacturer Website - Full Stack : Live Preview - Source code : Client - Server

- Developed a website using React Js, Authentication for Firebase, Tailwind CSS DaisyUI, React Hook Form and React Query. Stripe Payment and Upload File, Toastify, and so on.
- Tools Manufacturer of users and administrators. For Admin, more features are available
- MongoDB, NodeJs - for Security JWT Token
- JSON Web Token is used in the project for Security, where any public man cannot get from any tools. It is secure only. the user sees his own information. This information will not be seen by any public user. otherwise, a private user tool. But the admin can see every user. Where can delete & make another user admin This role is only available for the admin.
- Pagination is used for better performance & user experience
- If a user registers as a new user, can update his profile.
- Admin can add new products, delete and update
- Most important things that the CRUD operation used for this project

Inventory Management Website: Live Preview - Source code : Client - Server

- A Single Page Application Website Developer by React Js, for Designing, Adding TailwindCSS
- Firebase authentication, Pagination data. Axios API & more technology & features implemented
- Node Js & MongoDB database, API security using JSON web token
- This website is quite simple, where any user can add a new product if the user is already logged in. On my items page, the user can delete the product which was added by this user.
- Private route integrated if a user wants to access my items or inventory page. The user who is not logged in will go to the sign-up page. If the user already exists in the firebase database there the user also can log in. For forgetting a password reset a new password is available by email.
